

**HANDHELD PORTABLE WIRELESS DIGITAL CONTENT PLAYER****ABSTRACT OF THE DISCLOSURE**

A portable handheld digital content player has an integrated wireless interface, an integrated FM transmitter and an integrated auto on and auto off feature for ease of use in vehicles. The player and associated software on a base content server provide automated broadband wireless content downloads to the player while in a vehicle and transfer of audio to the vehicle stereo via FM band transmission without the use of an accessory. The player integrates an FM scan function to search for a suitable frequency for transmitting within the FM band. The player integrates some PDA-like functionality including personal contact information, appointment calendar, user schedule, email in addition to others.
